INTRODUCTION

My name is Abdul Jaleel h. I am from somwarpet, a place located in coorg district and currently I am residing in Bangalore. I have completed my Electronic and communication Engineering in the year 2019. And had been working since 2 years as a Manual Test Engineer with TEST YANTRA PVT LTD. I have worked on project with CRM domain and HMS domain. Being a Test Engineer I got exposure towards complete software life cycle starting from requirement gathering till delivery with minimal time and team size, without compromising quality through agile as well as scrum methodologies. In addition to this I was engaged in activities like writing test cases, reviewing other's test cases. While writing test cases, sometimes it does happen that we write certain number of test cases and suddenly customer changes the requirement so at that point of time we need to understand the customer concern and identify the risk, analyze it and drive the testing process. I was also involved in preparing Tracability matrix and have a good exposure towards exploratory testing and adhoc testing. I had been a part of impact analysis meeting, daily stand-up meeting, sprint review meeting and retrospective meeting.

There is a saying: "A passionate tester is always better than a technically sound developer"

So this always keeps me boosted and I try to keep on working without getting bored. Talking about my achievements; I was given the best reviewer award in my company further I was in-charge of brainstorming session which was conducted once in a week. Later I was also involved in some session specially conducted for new comer to the company where I use to share experience of mine when I was new to the company. Other than that what are dos and don'ts. What are the things that need to be kept in mind to easily adopt the company's work culture and be a part of the organization.

If I talk about my strengths, I'm flexible and adaptable towards my work and eager to learn new things. I am capable enough to do the assigned work smartly.

Talking about my hobbies: I do have couple of hobbies like playing badminton, watching movies but especially I am interested in the process of making a movie. Also I love interacting with people, people have different perception and thought process so I get a chance to learn something new and try to add it to my skill set which in turn helps me to build my personality.
